

# DS 175 7" PLANETARY POLISHER

**Planetary Polishing System**

The **DS 175 7" Planetary Polisher** is a sturdy, planetary powered transmission that can be driven with any 5/8-11 (or optional 14-2 mm) right angle tool, operating less than 5,000 RPM. A variable speed power unit is optimum. Three, 3" inch, planets rotate around the center at the same speed as the driver. If the driver rotates at 4,000 RPM, the planets rotate at 4,000 RPM.

The drive unit may be attached to the transmission centered over the platform or behind the center, depending on the application (see photo above, left). The DS 175 will grind, hone, polish or clean steps, counter tops, floor edges, under toe kicks or other small areas. Scratch removal, surface restoration or preparation will be quick, easy and perfectly flat. The system may be used wet with a slurry skirt (use a GCFI) or dry. A vacuum port is provided.

## SAND

## GRIND

## HONE

## POLISH

Voltage and Current  
Driver Speed  
Platen Speed  
Platform Speed

You supply  
0 to 5000 rpm, maximum  
0 to 5000 rpm  
0 to 830 rpm

Spindle required 5/8-11 or 14-2 mm  
Platen Size 3"  
Tool Size 7"  
Tool Weight 5 lbs

\*Suggested Retail with slurry skirt,  
you provide power unit

Other Planetary Polishers Available:

DS 301 12" Counter Model  
DS 302 12" 2 HP Floor Unit  
DS 602 24" 2 HP Floor Unit  
DS 605 24" 5 HP Floor Unit
